

Training in ISSB and Construction of Pilot Houses

Partner: Enabel

Date: March – July 2018

This year, HYT was delighted to become an implementing partner for Enabel (Belgium Development Agency). The ongoing success of the Enabel funded projects has seen HYT go from strength to strength.

Currently, four affordable houses have been designed and constructed in line with traditional values, using locally available materials. The build utilises curved ISSBs and grass thatching, it takes just 3 weeks to assemble this fusion of innovative sustainable technology and traditional standards.

The houses are the tip of the iceberg: each Enabel project trains up to 25 local youths and leaves communities with the ISSB press and the knowledge to continue sustainable construction.

Number trained: 76

Energy saved: 26.04 MWh

Average cost: (Matony, Moroto, Nakapiriprit & Kiryandongo) = 3,688,000 UGX/ 987 USD
